

Jhabindra Pandey

Houston, TX 77070 | 3462185409 | jhabindra793@gmail.com

Personal Summary

Senior Java Backend / Microservices Engineer with 8+ years of experience designing and delivering cloud-native, high-performance backend systems using Java, Spring Boot, and event-driven architectures. Proven expertise in modernizing monolithic applications into scalable microservices, implementing real-time data streaming with Apache Kafka (Confluent Platform), and deploying secure, production-grade services on AWS and Kubernetes. Strong background in CI/CD automation, cloud deployments, and system reliability within financial and enterprise environments.

Technical Skills

Languages:

Java, JavaScript, Python

Frameworks & Libraries:

Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JPA

Microservices & Messaging:

Microservices Architecture, RESTful APIs, Apache Kafka (Confluent Platform), Apache Pulsar, Event-Driven Architecture

Databases:

Oracle, PostgreSQL, DB2, SQL Server

Cloud & Containers:

Amazon Web Services (AWS): EC2, Elastic Beanstalk, Lambda, S3, Glue, Fargate
Kubernetes (On-Prem), Docker, Containers

DevOps & CI/CD:

Jenkins, Lightspeed, Harness, Maven

Monitoring, Logging & Security:

Log4j, SLF4J, Spring Security, Java KeyStore (JKS), Encryption

Testing & Quality:

JUnit, Mockito, SonarQube, Fortify

Tools & Platforms:

Git, Bitbucket, JIRA, Confluence, Postman, Swagger

Professional Experience

CONSULTANT | 07/2023 - 12/2025

Synechron (Client - Citi) - Tampa, FL

- Designed and implemented **Java 8+ based Spring Boot microservices**, leading the decomposition of a legacy monolithic application into a scalable microservices architecture.
- Built **event-driven backend systems using Apache Kafka (Confluent Platform)** to process approximately **40 million financial transaction messages per day**, ensuring high throughput and fault tolerance.
- Integrated **Oracle, DB2, PostgreSQL, and SQL Server** databases using **Spring Data JPA and Hibernate**, optimizing SQL queries and improving API response times by ~40%.
- Deployed and managed backend services on **AWS (EC2, Elastic Beanstalk, S3)** and containerized workloads using **Docker and Kubernetes (on-prem)** for scalability and resiliency.
- Implemented **Redis caching** to reduce data load times during application startup and improve overall system performance.
- Built and maintained **CI/CD pipelines using Jenkins, Lightspeed, Harness, and Maven**, automating build, test, and

deployment workflows for microservices.

- Secured APIs and messaging infrastructure using **Spring Security, Java KeyStore (JKS)**, and encrypted communication standards.
- Developed comprehensive **JUnit and Mockito** test suites achieving **80–95% code coverage**, integrating **SonarQube and Fortify** scans into CI pipelines.
- Implemented centralized logging using **Log4j and SLF4J** and documented architecture and production fixes in **JIRA and Confluence**.

SR. JAVA DEVELOPER | 10/2021 - 07/2023

Infosys (Client - PepsiCo) - Plano, TX

- Developed backend services using **Java, Spring Boot, Spring MVC, and Spring Security**, supporting business-critical microservices in an Agile environment.
- Designed and owned a domain consisting of **four Spring Boot microservices**, implementing RESTful APIs and enforcing service-level security.
- Implemented asynchronous messaging using **Apache Pulsar and Kafka**, enabling reliable event-driven communication across backend systems.
- Integrated **PostgreSQL and Oracle** databases using **Spring Data JPA and Hibernate**, writing optimized SQL and HQL queries.
- Deployed and managed microservices on **Kubernetes (on-prem)** using **Docker containers**, ensuring scalability and high availability.
- Built automated **CI/CD pipelines using Jenkins and Maven**, incorporating **SonarQube and Fortify** for quality and security validation.
- Developed extensive **JUnit and Mockito** test cases, achieving **up to 95% unit test coverage**.
- Used **Git, JIRA, Confluence, Postman, and Swagger** for source control, documentation, and API testing.
- Implemented structured logging using **SLF4J** for monitoring and troubleshooting.

JAVA DEVELOPER | 06/2020 - 08/2021

American Express - New York, NY

- Designed and developed backend applications using **Java, Spring MVC, Spring Boot, and J2EE design patterns** (DAO, DTO, Service Layer).
- Built secure **RESTful APIs** using **Spring Security**, implementing authentication and authorization mechanisms.
- Integrated **Oracle and SQL Server** databases using **Hibernate ORM and Spring ORM**, including stored procedures and complex queries.
- Deployed Spring Boot microservices to **AWS using Elastic Beanstalk**, leveraging **EC2, S3, and Glacier** for storage and backup.
- Implemented **Spring AOP** for cross-cutting concerns such as logging, security, and declarative transaction management.
- Used **JUnit and Mockito** for unit testing and validated services using **Postman and Swagger**.
- Supported deployments on **Apache Tomcat and WebLogic** application servers.

JAVA BACKEND DEVELOPER | 10/2018 - 03/2020

HP - Palo Alto, CA

- Developed backend components using **Java, Spring MVC, Spring Boot, and Hibernate**, mapping POJOs to **Oracle and DB2** database tables.
- Migrated selected backend services from monolithic architecture to **Spring Boot RESTful microservices**.
- Implemented service security using **Spring Security** and restricted access to **Spring Boot Actuator** endpoints.
- Deployed applications to **AWS Elastic Beanstalk**, configuring **auto-scaling** for development environments.
- Implemented centralized logging using **Log4j**, supporting debugging and production traceability.
- Used **Git, Maven, JUnit, and Mockito** for version control, build automation, and testing.

JAVA DEVELOPER | 06/2017 - 08/2018

PayPal - Irvine, CA

- Developed backend applications using **Java, Spring MVC, Hibernate, and RESTful services** in a microservices-

oriented environment.

- Implemented authentication and authorization using **Spring Security**.
- Created and optimized **Oracle database** stored procedures and Hibernate-based queries.
- Used **jQuery and AJAX** for client-side validations and asynchronous backend interactions.
- Managed source code using **Git and SVN**, following version control best practices.
- Developed **JUnit** test suites to validate backend functionality and ensure code quality.
- Implemented application logging using **Log4j** for monitoring and auditin

Education

University of Houston Downtown - Bachelor of Science

Computer Science
